SUBJECT: AVIAN INFLUENZA: USG SUPPORT FOR WORLD BANK  
PACKAGE

REF: A. ANKARA 341, B. ANKARA 263, C. 05 ANKARA 7561 AND  
PREVIOUS.

ANKARA 00000630 001.2 OF 002

[¶](#)1. (SBU) SUMMARY. The World Bank is moving ahead with a flagship Avian Influenza (AI) package for Turkey that should be ready for Executive Board approval by the end of March. A U.S. contribution as part of this package could help fill local gaps in a country that remains highly vulnerable to new outbreaks, could bolster the region's response, and could help leverage other assistance. A U.S. contribution outside the package would not have the same impact, either in Turkey or

regionally. End Summary.

¶12. (SBU) The World Bank Resrep tells us he plans to enter into loan negotiations with the GOT on February 21-22 for a \$24 million IBRD loan, out of a \$44 million AI package that includes \$13 million in EU grants and Turkish public and private sector contributions. Given the 5-6 week time lag between conclusion of negotiations and Executive Board approval, this means the package would be finalized at the end of March. Both the World Bank and Turkish Government would welcome U.S. Government participation in this package, which will be seen as the flagship vehicle for the international community efforts.

¶13. (SBU) Turkey has done a relatively good job on AI animal and human response during the recent outbreaks that lead to the first four human deaths outside Asia. But, as the visiting multi-agency team found, the response was far from perfect and there are key gaps in surveillance and communication (refs). Both the local reps of international organizations and the Turkish government see the current lull following the last death on January 15, as only a respite. Outbreaks in animals continue, and migratory birds will begin returning to Turkey from the south over the coming months. Although culling of backyard fowl is proceeding, Turkey remains very exposed to another outbreak.

¶14. (SBU) We see potential benefits in at least a small contribution to the World Bank package:

--Turkey's geographical location at the crossroads of global bird migrations makes its response critical for

ANKARA 00000630 002.2 OF 002

the region and the world.

--Turkey can serve as a model and resource for the region. An example would be developing a regional capacity for laboratory testing for H5N1.

--Even a modest expenditure would engender many benefits in the U.S. relationship with this key country. Our absence from a World Bank/EU package would be well noted.

¶15. (SBU) As discussed with the visiting team, areas where USG expertise and support could make a difference include supporting additions to human laboratory capacity testing in Ankara (raising to Bio-Security Level 3). This would create a regional capacity that could support the Caucasus, Iraq, and other neighboring countries. Other areas in which the impact of U.S. support could be felt beyond Turkey include (a) augmenting veterinary surveillance training to increase detection capacity for handling multiple outbreaks could be important, and (b) help in developing communications outreach capability for a region of the world that is characterized by high illiteracy rates and multiple languages and ethnicities. An alternative currently outside the scope of the World Bank project - but which could be added - would provide catalytic funding and technical assistance to Turkish activities aimed at crisis response capacity building with neighboring countries. Ankara might have more success than the U.S. or the U.N. agencies in places like Azerbaijan, to say nothing of Syria or Iran.

¶16. (SBU) It appears to us that the World Bank package is responsive to Turkey's needs and well coordinated, although with some difficulty, with relevant GOT agencies. The USG has played an important role in shaping the overall package proposed by the World Bank through our substantial interaction and input with IO's during two AI visits and in Washington.
